

Task 1 Overview

Foundations of Health Economics (1.1)

Explains how health insurance splits medical bills between families and insurers through premiums, deductibles, copays, and out-of-pocket maximums.

Real Cost of Care (1.2)

Breaks down why healthcare costs are so complex, showing how a single visit can trigger multiple separate bills and massive gaps between hospital sticker prices and negotiated rates.

Access Barriers & Disparities (1.3)

Illustrates how physical distance, specialist shortages, and language barriers prevent people from getting care even when they have insurance.

Thank You!
